

inSynergie provides you with flexible solutions for demanding museum installations. Any interaction from crossing a motion detector to the identification via RFID system can be freely assigned to an activity or sequence due to the superior inSynergie technology. Therefore contents such as audio, video and lighting can be arranged as desired. The use of standard network technology results in the individual connectability of the systems. Subsequent extensions are possible at any time. The specifically selected robust hardware, designed for continuous operation, enables the automatic switch-on and switch-off of the entire installation.

inSynergie components:

- iSMP3
- 16 Button Matrix Keypad
- iSMovieMachine L
- iSMovieMachine S with Contact Control Unit
- iSCom Software Module
- I/O Expansion Card
- iSOperate Software Module
- iSClient
- iSMaster XL
- iSDataManage Software Module

additional components:

- Head Phones
- Monitor
- Switch Buttons
