

The extremely customizable inSynergie technology allows unlimited integration of audio, video and lighting for any event.

Due to the iSMovie software, frame-synchronous panorama projections are made possible. Transitions can be set up on top and bottom as well as left and right via soft edge. A screen tiled by any amount of projections results. Any distortions are correctable via integrated video warp when projecting on a non-planar surface.

inSynergie components:

- iSMaster XL
- iSMovieMachine L
- MTC Interface
- MTC Distributor 1 to 5
- iSOperate Software Module

additional components:

- Beamer
